ARGO NEWS YOU SHOULD KNOW

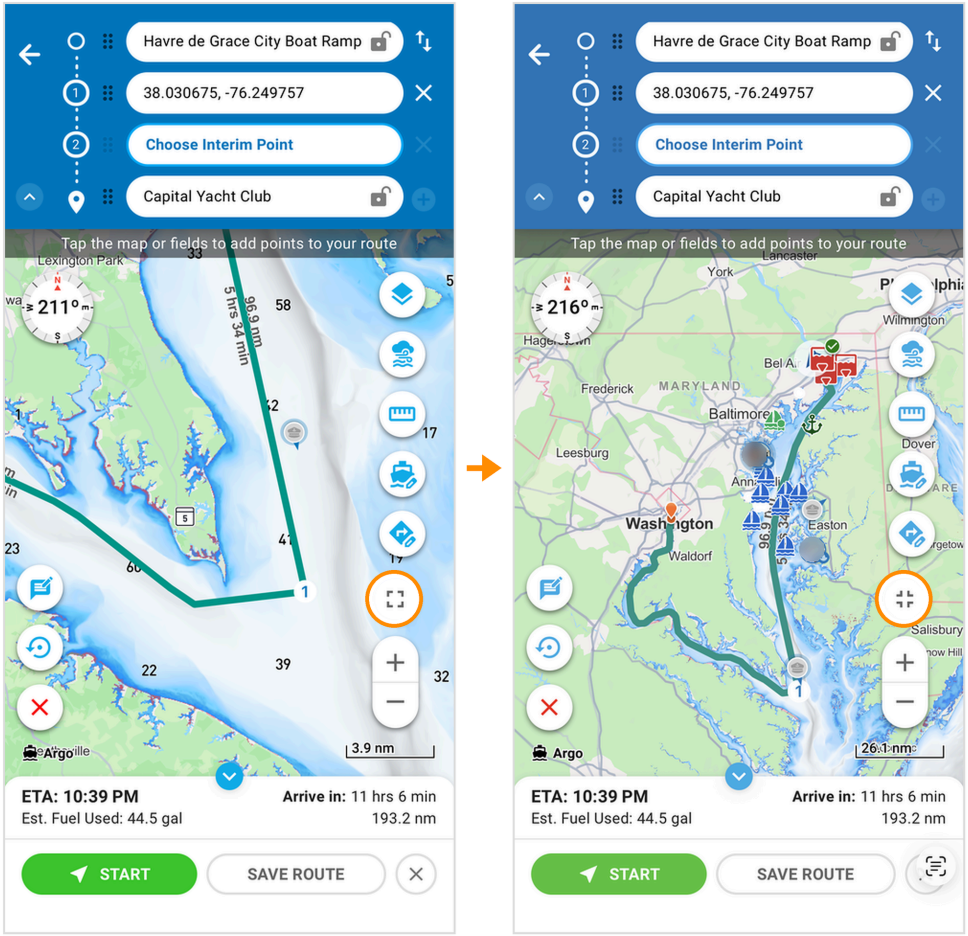

Here's what we've got for you this week:

- What's New: See Your Whole Route in One Tap
- On the Blog: What We Heard at the Annapolis Boat Shows

- Community Spotlight: SimplyGPX
- Quick Tip: What's That Tide Station Number?
- Argo Live: Save the Date for November 12
- Marina Spotlight: Anchor Yacht Basin Claims Its Listing

What's New this Week

See Your Whole Route in One Tap

You're planning a run down the Bay, or you're halfway there, and you want to see the whole route at once. Pinching and dragging to find both ends isn't fun, especially with one hand on the wheel.

Now it's one tap. Look for the button with four corners in the lower right, just above the + zoom button. Tap it and Argo zooms out to show your entire route.

Tap it again to jump back to the zoom level you were at.

Try it on your next route.

On the Blog

What We Heard at the Annapolis Boat Shows

On the last day of the Powerboat Show, there was so much water around our tent you couldn't get in or out. People found a way in anyway.

Here's what boaters told us at both Annapolis shows, what got them excited, and where we ate when we could get away.

SimplyGPX: Make Your GPX Files Fit Your Chartplotter

Ever tried to load a route onto your chartplotter and had it choke? Many GPS devices can’t handle more than 250 points at once, and a long track from a day on the water can have thousands.

SimplyGPX fixes that. It was built by Dave Rowe, one of Argo’s strategic advisors.

Open a GPX file in SimplyGPX, and it removes the points that don’t change the shape of your route. It can also split long paths into smaller files your device can handle.

It all runs in your browser, so your files never get uploaded anywhere.

Exporting a route from Argo Premium? Run it through SimplyGPX first.

Try SimplyGPX

Quick Tip

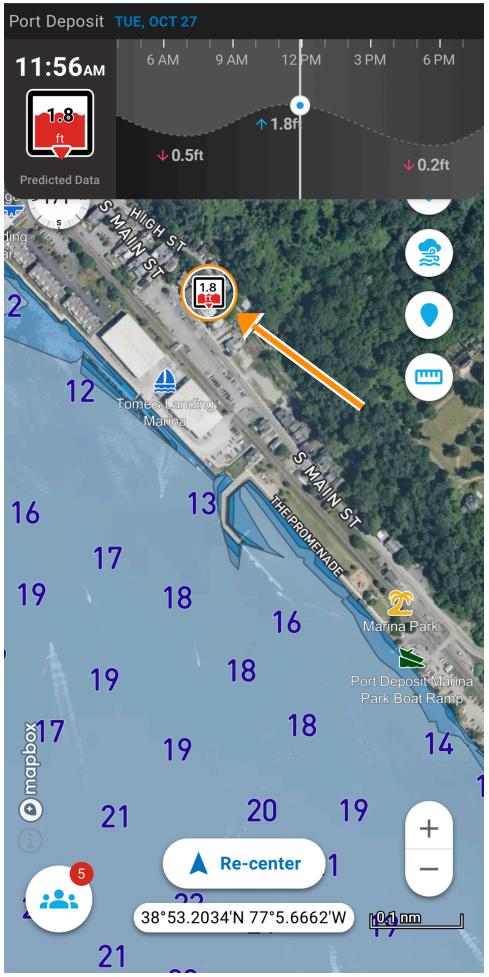

What's That Tide Station Number?

Ever wonder what the number on the square tide station icon means? It's the predicted tide right now—it tells you roughly how much water to add to or subtract from the charted depths on your screen.

Argo's chart depths reflect Mean Lower Low Water (MLLW), the long-term average of the lower of each day's low tides. So if the chart says 4 ft and the nearest station shows +1.8 ft, you can expect about 5.8 ft. These are predictions, so treat them with the same level of confidence as a weather forecast.

The color shows which way the tide is heading. Red with a down arrow indicates the ebb (falling tide), while blue indicates the flood (rising tide).

Tap the station to see the day's highs and lows to help you time a run through shoal-prone areas.

Next Argo Live

Save the Date: Thursday, November 12

Our next Argo Live is Thursday, November 12 at 8 pm ET. Bring your questions and hang out with the Argo team.

Marina Spotlight

Anchor Yacht Basin, Edgewater, MD

Anchor Yacht Basin sits at the mouth of the South River, a few miles south of Annapolis. They just claimed their listing in Argo, so the boaters looking them up now see info straight from the marina.

For boaters: 125 slips for boats 20 to 80 feet, transient slips, gas, diesel, and pump-out at the fuel dock, two travel lifts up to 75 tons, a ship store, and winter dry storage.
